“specializing the unusual”

EPIPHYLLUMS

Of all the beautiful flowering plants imported from the four corners of the earth, none can excel in spectacular appeal the epiphyllums. Although native to the tropical countries such as Brazil, Mexico and the Argentine, the majority of these gorgeous types have in the past been hybridized in Europe. And now in our own Southern California numerous, superior kinds are being developed.

One could imagine nothing more congenial to Southern California climate and modern day architecture than these streamlined plants bearing a profusion of strikingly beautiful flowers from 6 to 10 inches in diameter, in all the colors of the rainbow. There are white kinds fringed in lime yellow and soft brown, pinks in monotone or iridescent tints, purples with flame and chartreuse, molten gold with vermillion, bronze with scarlet, blood-red with violet and others too numerous to mention.

Some types are effective in wall or hanging baskets, but the majority display their charms to best advantage when trained against a trellis or wall.

Our "Jeweled Corridor" during May and June presents a spectacle of dazzling beauty that you cannot soon forget. Bring your friends and give them a real treat.

EPIPHYLLUMS

CULTURE

For best results, plant your Epiphyllums in a semi-shady location in a mixture of 1/3 good sandy loam and 2/3 well rotted oak leafmold. Add 1 teaspoon of bonemeal to the soil mixture for a 6-inch pot and proportionately more for larger containers.

Give them a heavy dressing of steer fertilizer in February and a light top-dressing of a good commercial fertilizer in August.

Keep them moderately moist, varying with the seasons, and be sure that their drainage is good.
